

# From the Training Manager's Desk

SRCETC has grown over the years from a humble beginning as “**Southern Railway Institute of Civil Engineering Technology**” in 1988 to its present form with modern gadgets for teaching, modern class rooms, fantastic model yard, lab, computer centre, library etc..

Today, Indian Railways are passing through a great phase with increased axle load, moving more volume of traffic and there is a tremendous increase in growth over the years. With more innovations and meeting challenges, all the while earning more and more revenue. We, as Engineers, managing approx. 45% of the Indian Railways assets, have to rise up to the occasion and contribute positively to the Indian growth.

We believe that we have the responsibility to provide holistic training for all the Civil Engineering supervisors. All the training activities and courses held at the SRCETC strive to provide cutting edge skills, knowledge and mechanisms for planning and implementation in the field.

SRCETC is contributing its bit to the Southern Railways' travel on the growth path by disseminating the knowledge in the field of civil engineering. SRCETC is actively engaged in imparting training not only to the Supervisors of Southern Railway but also the supervisors South Western Railway, Wheel and axle Plant, YNK, RVNL, ICF. As a constant endeavour to widen the horizon of learning, SRCETC has increased its reach with the use of information technology through its modified website. I hope that SRCETC website is a fountain of knowledge for railway Civil Engineers.

**Wishing all the best to all of you.**
